

WARRANT PORTAL

WARRANT PORTAL

WARRANT PORTAL IS A BESPOKE CLOUD BASED APPLICATION WITH INTELLIGENT USER FRIENDLY ARCHITECTURE.

MULTIMODAL CAPABILITY

Warrant Portal creates transparency across a multimodal platform with real time, first screen filtering and a split page, time-saving preview summary.

TRACK AND TRACE

Collating real time event information provides key strategic status markers across the supply chain with a smart navigation panel segmented by precise category types. The portal provides users with a productive and efficient track and trace tool.

PURCHASE ORDER MANAGEMENT

With full POMS capability to either PO or SKU level, up-streaming detailed order book information to monitor vendor compliance ensures your stock is ordered, booked and shipped to meet all ex-factory and due date milestones.

E-BOOKING

Our e-booking facility helps shippers eradicate the traditionally labour intensive and unproductive part of placing an order. With a password, unique ID and internet connection, shippers can integrate with the portal seamlessly.

ONLINE APPROVALS

Approving orders from your desktop, tablet or phone couldn't be easier with our bespoke online approval app. With full autonomous options to approve or decline, a comments box narrates order history between all collaborative parties.

DOCUMENTATION

Warrant Portal thrives in an environment where immediate access to copy documentation is essential. Via a central document repository, users can download both supplier and Warrant invoices, packing lists, bills of lading and any other relevant documentation.

REPORTING

Warrant Portal produces industry standard reports as well as facilitating any bespoke and auto scheduled requests. Reports can be converted to Excel or viewed on screen.

ADDED VALUE APPS

Added value apps for requirements such as rates and tariffs, standard operating procedures and user manuals are available. Apps of any nature can be designed for specific road-mapping initiatives.

DATA LINKS

Fully EDI compliant, the portal will link to any capable system, streamlining data interchange, improving accuracy and reducing cost.

The portal eliminates the time and risk out of connecting, by using sophisticated data mapping software that captures native files from your system directly into our software.

BESPOKE ARCHITECTURE

Warrant Portal is a bespoke build, not a shoe horned system, it is one that can be tailored according to your changing business requirements.

IMPLEMENTATION

Our implementation handbook dictates protocols so each project is structured into individual work streams managed by an agreed schedule.

We review range architecture periodically and deliver adjustments and upgrades where necessary.
